

# Status, Notification and Updates

## Backlog:

Here you will see list of works that are currently in development queue:

## 8 August 2024

- Now each company can define a custom pattern for sending verification code to their clients.
- "Kavenegar" SMS provider users, now can send verification SMS based on already defined patterns.
- Users can send messages using "Enter" and they can go to next line using "Enter + Shift" and "Enter + Ctrl"
- CORS errors have been enhanced from technical point of view, so there is no need to make any changes when adding a new sub domain to your domain.
- Users can see errors accordingly, when trying to login or getting validated by recaptcha.
- To enhance security, all the authentication tokens have been moved to Cookies instead of localStorage, also in future this will give us the opportunity to control users login or logouts systematically.
- Enhanced error handling communications between backend and PTAs, so PTAs can know how to manage failed scenarios better.

## 6 August 2024

- Enhanced deployment scenarios and configured three different stages of deployment in order to keep development, production and testing scenarios separate and clear.

## 5 August 2024

- For better experience in sending voice and for future multilanguage interfaces, users now can choose their desired language in a popup in the begging ( Only one time ) and voice actions will be more

accurate.

- Enhanced socket connection for the chat interface, so users do not receive a message twice or they get disconnected while losing internet connection.
- Enhanced "Bit Rate" of audio recording so PTAs can understand voices more clearly.
- Now users can send voice messages from "IOS" and Apple devices.

# 1 August 2024

## Features:

- SMS configuration for "kwtSMS" is set up.

## Enhancements:

- Users can see authorization/verification steps when starting a new conversation or logging in.

# 31 July 2024

## Enhancements:

- Voice recording quality on Chat Interface.
- Voice recording UX is better now.
- Voice recognition by the AI is more on point.

## Features:

- Cancel button when recording an audio
- Recorded time is added when recording a new audio
